

Help Center & User Manual

Welcome to the Customer 360 Help Center. This guide will walk you through the core navigation, interface panels, and premium features of the client intelligence dashboard.

Welcome to Customer 360

Customer 360 is an advanced, high-performance customer relationship management and intelligence dashboard designed specifically for modern client managers and bankers. Featuring a cinematic 3D interface, modular tabs, and holographic design themes, it aggregates all key client profiles, portfolios, leads, cases, mandates, and active credit cards into a single cohesive interface.

High Performance

Instant profile loading, quick access workspaces, and canvas-based dynamic text columns that fit perfectly on all screen resolutions.

Cinematic Experience

Fluid transitions, GSAP particle systems, red/neon glowing themes, and interactive 3D visualizations that adjust to the client's current relationship status.

1. Customer Search

To access client information, you begin in the ****Customer Search Interface****. This landing page serves as the entry gate to the intelligence application, enabling you to locate customer files using identifiers.

Figure 1.1: Customer Search portal screen featuring query input and quick navigation triggers.

1 Launch Search

Access the portal page. Use the glowing search box to input a client's Customer ID, Customer Name, or PAN Number.

2 Select Client Profile

Click on the target customer block in the search results card. The page will play a premium fade transition and load the client's profile in the main dashboard.

3 Direct Dashboard Linking

You can also load a client directly by passing the query parameter in the URL (e.g., `index.html?customerId=CUST001`).

2. Dashboard Navigation

Once a client profile is loaded, the main dashboard resolves. The screen is structured into three main zones for effortless navigation and overview:

Figure 2.1: Main Customer 360 Dashboard showing sidebar details, central 3D space, and support shortcuts.

Large Left Profile Sidebar

Displays detailed contact information, the client's tier classification (e.g., Platinum), branch details, and the assigned Relationship Manager's contact card.

Sticky Header Bar

Provides theme selectors, alerts toggles, profile editing shortcuts, and the system settings hamburger dropdown (:).

Central Cinematic Workspace

Houses a 3D avatar orb showing visual status. Below the orb sits the quick-access grid containing dynamic modules (Holding, Leads, Cases, Cards, etc.) that open inside the modal overlay.

Settings & Help Menu

Click the hamburger button (:) in the header to access options, trigger the system tour, or open this Help Center.

3. Portfolio Holdings

The **Portfolio Holdings Explorer** is a decoupled module inside the quick-access grid that gives you complete visibility into the client's financial relationships with the bank.

Figure 3.1: Portfolio Holdings panel featuring category tabs, account lists, and auto-spaced detail values.

When you click the **Holding** module, you are presented with three high-level category cards:

Assets: Highlights loans, investments, and capital resources.

Liabilities: Details checking (CASA) accounts, savings, and term deposits.

Value-Added Services: Tracks active mandates, standing instructions, insurance, and benefits.

1 Double-Panel Explorer

Clicking any category launches a double-panel explorer modal. The left side lists all linked bank accounts, and the right side displays fields and balances.

2 Search & Filter

Use the search input at the top of the account list to instantly filter accounts by name or number.

3 Dynamic Canvas Spacing

The right preview panel dynamically checks the pixel width of value strings offscreen using an HTML5 Canvas. If a value overflows the standard column, it automatically expands (spans) to two columns or full width to prevent clipping.

4. Credit Cards

The **Cards Module** details all linked credit cards, limits, balances, payment dates, and reward points. You can select individual cards to inspect transaction parameters, block statuses, and design visuals.

Digital Card Designs

Displays a digital card mockup showing design presets matching the customer's active card tier.

Real-Time Limits

Inspects total credit limits, available balances, payment status, and interest cycles.

5. Interactive Onboarding Tour

For new users, the application includes a built-in step-by-step **Interactive Tour**. It highlights key components of the UI and introduces the controls.

1 Trigger Onboarding

Click the hamburger button (:) in the top-right header, then select **Start Tour**.

2 Follow Steps

The dashboard will dim, and a glowing highlight capsule will guide you through the client info sidebar, 3D avatar, and quick access modules sequentially.
